

Appetite Hormones in Autism Spectrum Disorder (ASD)

Principal Investigators: Dr. Andrea Haqq and Dr. Lonnie Zwaigenbaum
University of Alberta, Department of Pediatrics

Researchers at the University of Alberta are recruiting **girls and boys** with ASD between 5-12 years of age

We hope to better understand the role of appetite hormones in body weight regulation in ASD.

During our study we will ask participants to:

- ❖ Have their weight, height, waist, and body composition measured
- ❖ Have a blood draw after an 8 hour fast (a snack will be provided after)
- ❖ Answer questions about appetite, physical activity, and diet
- ❖ An honorarium will be provided to participants
